

# IMPORTANCE OF FEEDBACK

Rafik Samuel, MD  
Professor of Medicine  
Chairperson Clinical Competency Committee

# How are the residents doing?

# How do we get better?

- Why it is called a TRAINING program
  - Improving through feedback
  - Developing competence
  - How would you learn w/o feedback?
  - The biggest mistake you can make is the one you don't learn from
- 

# Competency-Based Training

show us what they learn, not what you teach

- Traditional Framework
  - Do your time
  - Fulfill curricular requirements
  - We taught what we needed to teach
  - Teacher-centered
- Outcomes-based approach
  - Possess the abilities in all domains at specific stages of education
  - Learner-centered
  - Milestones project

# ACGME General Competencies

- Medical Knowledge
  - Patient care
  - Professionalism
  - Interpersonal and communication skills
  - Practice-based learning and improvement
  - Systems-based practice
- 

# Milestones

## what are they

- Milestones project paper
  - Identify 142 milestones grouped by competency
  - Anchors to identify specific behaviors to track progress of trainees
- 

# Examples:

- PC/F<sub>1</sub> Recognizes situations with a need for urgent or emergent medical care including life threatening conditions. (6)
- P Treats patients with dignity, civility and respect regardless of race, culture, gender, ethnicity age or socioeconomic status
- Routinely identifies subtle or unusual physical findings that may influence clinical decision making using advanced maneuvers where applicable ( 30 months)

# Purpose of feedback and evaluation

- Why do it?
  - Promote life long learning and self-reflection skills
  - Provide clear milestones in order to progress through the program to graduate as a competent and independent physician
  - Offer help if your trajectory is off
- 

# Setting the Stage

- Expectations of the trainee must be clear
- Before working with the trainee, take time to set goals and expectations for the time together
  - “I expect you to be the leader of the team and make decisions on the patients”
  - “I expect you to manage up to 5 patients on your own and know all details about them”
  - etc

# Feedback Definitions

- Formative Feedback
  - This is the feedback to help the trainee get better
  - This can be done on the fly, midway through the rotation or every few days as things come up
- Summative Feedback
  - This is the evaluation at the end of the rotation
    - This should NEVER be a surprise to the trainee

# Observed Encounters

- You have to be with the trainee and observe what they do
- Listening to their presentations on rounds is not enough
- It is amazing what you see when the trainee is with the patient
  - How do they talk to the patient
  - How do they examine a patient
  - How do they tell the patient what is going on

# Tips on keeping track of the Trainee

- Not only do you have to observe the trainee, you have to make sure you have specifics
  - It is important to keep track of things the trainee does well and needs improvement upon
    - Keep a notepad about both things
      - Jot down something they did well
      - Point out something they can work on

- 
- Now let's talk about how to give feedback

# Feedback

- Traditional Definition:

The process by which the teacher **provides** learners with information about their performance for the purpose of improving their performance

- The problem:

- Teacher *telling* learner; suggests *control* by the teacher

# Some Important Points

- Trainees are active and volitional
  - Trainees do not have passive and predictable responses to given inputs
  - Information (“telling”) is not enough
- 

*Feedback is seen not only as having influence on immediate tasks but of building students' capability for making judgments about their subsequent work*

# Effective Feedback

- Answers three questions:
  1. Feed up
    - Where am I going? (the goals)
      - Milestones
  2. Feedback
    - How am I doing?
  3. Feed forward
    - Where to next?
      - Action and learning plans

# Basic Elements of Feedback

- Specificity
  - Be specific; focus on behaviors, not person
  
- Timeliness
  - Try to give feedback as close to the events as possible

# Basic Elements of Feedback

- Positive/negative
  - + more than - where possible
  - Think “reinforcing the good” and “correcting the bad”
    - Correcting should help fill a gap
- Trainee reaction
  - Should now be viewed as a dialogue, not just “obtaining a reaction”
- Action Plans
  - Where does the trainee go from here?

# Receptivity to Feedback: Key Factors

Complex interplay between:

- Fear
  - Of looking “stupid”
  - Receiving negative feedback
- Confidence
  - Related to amount of experience
  - Influence on willingness to seek accept feedback
- Reasoning processes
  - Emotion and analytic effects of “hot” and “cold” cognition

# Feedback Challenges: Low Self-Efficacy

- Faculty's own competence in the skill being assessed
- Feedback about non-cognitive competency domains
- Diagnosing the trainee's problem and offering an action plan

# Feedback Challenges: Uncertainty

- How should positive feedback be balanced with negative feedback?
- Should you use notes when providing feedback?
- How much feedback should be given?
- How serious to be giving feedback?
- What is the best order in which to give feedback?

# The Feedback Sandwich

Ask

Tell

Ask

*Konopasek L 2009;  
New York Presbyterian*

# Ask

- Ask trainee to assess own performance
    - Begins a conversation – an interactive process
    - Assesses trainee's level of insight and stage of learning
    - Promotes reflective practice
- 

# Tell

- Tell what you observed
  - React to the trainee's observation
    - *Feedback on self-assessment*
  - Include both positive and corrective elements
    - “I observed....”
    - Relate to the competencies and frameworks
- 

# Ask (again)

- Ask about recipients understanding and strategies for improvement (action plan)
  - What could you do differently?
  - Give own suggestions
- Commit to monitoring improvement together

# Benefits of Ask-Tell-Ask

- Trainee centered
  - Active and interactive
  - Avoids assumptions or judgment
  - Promotes reflection
- 

# Examples of Feedback

- “intern is not organized”
  - “needs to improve knowledge”
  - “needs to improve efficiency”
- 
- **TOTALLY USELESS!!!!!!!!!!**
- 

- 
- Instead of “intern is not organized”
  - Ask the intern about their organizational skills
  - Give a concrete example of what is not going well
    - Intern has difficulty following through on tasks
      - They forgot to enter fluid orders on patients that resulted in a significant error.

- 
- Ask them about their thoughts on why and how they can improve
    - Recommend that they use “boxes” and check them off as they are completed
- 

- 
- Instead of “needs to improve knowledge”
  - Ask them about their knowledge base
  - Tell them a concrete issue
    - There appears to be gaps in knowledge of pulmonology
      - For example, they couldn't come up with a differential diagnosis of pulmonary hypertension

- 
- 
- Ask for their thoughts and ways to improve
  - Suggest that they look up the information on at least one patient's medical issues each day

- 
- 
- Instead of “needs to improve efficiency”
  - Ask them what their thoughts are on their efficiency
  - Tell them something concrete
    - It has been taking about 2 hours to complete an H and P on a patient

- 
- Ask them their thoughts and offer a suggestion to fix it
    - After observing them do an H and P, it appears that they have significant problems coming up with a differential diagnosis. Recommend to use uptodate for quick reference to develop a list
- 

# Summative Feedback

- This is the evaluation you complete at the end of the rotation
- Both verbal feedback and written
- There should be nothing new in this information
- It is important that the written evaluation be completed as close to completion of the rotation as possible because you still remember the issues

# So How are the Evaluations Used?

- All marginal evaluations are flagged and sent to me
  - I forward these to the clinical competency coach
- Any pattern will trigger further evaluation
- Otherwise, there is the clinical competency committee that reviews these

# Clinical Competency Committee

Chair: Rafik Samuel

Members:

- Program Directors: Drs. Moyer, Brady, Lee and Blum
- Chief Residents: Harish, Alex, Cole, Charlie
- Core clinical faculty: Drs. Gersh, Taqui, McNellis, DeFrancesch, Hyatt, Chisty, Williams, Baang, Ravreby, and Punnoose
- Other faculty with significant resident contact: Drs. Vega Sanchez, Alvarez and Johnstone
