

Developing novel epigenetic therapies for ovarian cancer

Sergey Karakashev, PhD
Assistant Professor
Fels Cancer Institute for
Personalized Medicine

Selected publications:
Cancer cell (2020),
Cancer immunology
Research (2022)

Supported by:
NCI: K99CA241395
Fels Institute: Start-up
package

1. Identify potential epigenetic targets for ovarian cancer therapy

- Bioinformatics
- TCGA analysis
- Genome wide approaches

2. Develop novel therapeutic approaches for identified epigenetic targets

- Epigenetic drug library screens
- Gain or loss of function assays
- Viability assays

3. Test developed therapeutic approaches in preclinical animal models

- Orthotopic ovarian cancer *in vivo* models
- Patient derived xenografts (PDX)
- *In vivo* imaging (IVIS)
